

Breakthrough in Ultrasound Pain Therapy

- Hands-free, patch based wearable ultrasound
- Treats pain and expedites healing of injured site
- Improves clinician's throughput
- Easy to use in clinical setting, at home or work, anywhere & anytime, even during sleep

PainShield is a novel comprehensive wearable ultrasound solution for localized, neurological, musculoskeletal and soft tissue pain management. PainShield provides ultrasound therapy that reduces pain and expedites healing. Unlike conventional bulk wave ultrasound, the PainShield's unique therapeutic parameters allow for long, low intensity treatment sessions that are much more effective.

PainShield helps treat following conditions:

- Chronic and acute pain
- Neck and back pain
- Knee, elbow, shoulder and other joints pain
- Tendon and muscle pain
- Sports related injuries
- Arthritis and tendon inflammation
- Rheumatic pain
- Abdominal/pelvic pain
- Plantar fasciitis
- Tennis elbow
- Achilles tendonitis
- Carpal tunnel syndrome
- Trigeminal Neuralgia
- Tinnitus

PainShield for Trigeminal Neuralgia – Stop drugs – Avoid surgery

The PainShield has shown, in several studies, to effectively reduce pain and help nerve recovery for Trigeminal Neuralgia patients.

Treatment can take place anytime and anywhere even during overnight sleep.

- Allows for reduction in medication dosage and related adverse drug effects
- Treatment may help avoid surgical intervention
- Easy to apply, soothing treatment

PainShield therapy available and effective when you need it

Safe to use, one button - simple operation, rechargeable and portable
Self-adhering – ultrasound transducer in a patch for hands free therapy
Use it day or night, on the move or when you sleep
